

King of investment

presentation of the investment program

What is the King of Investment program?

It is the first fully-robotic program in the world, which generates profit free of investment risk and guarantees a minimum return on the investment. The program scans stock exchanges every 10 ms and performs a transfer from exchange A to exchange B fully automatically at any time of day or night for 365 days a year.

How does the King of Investment program work?

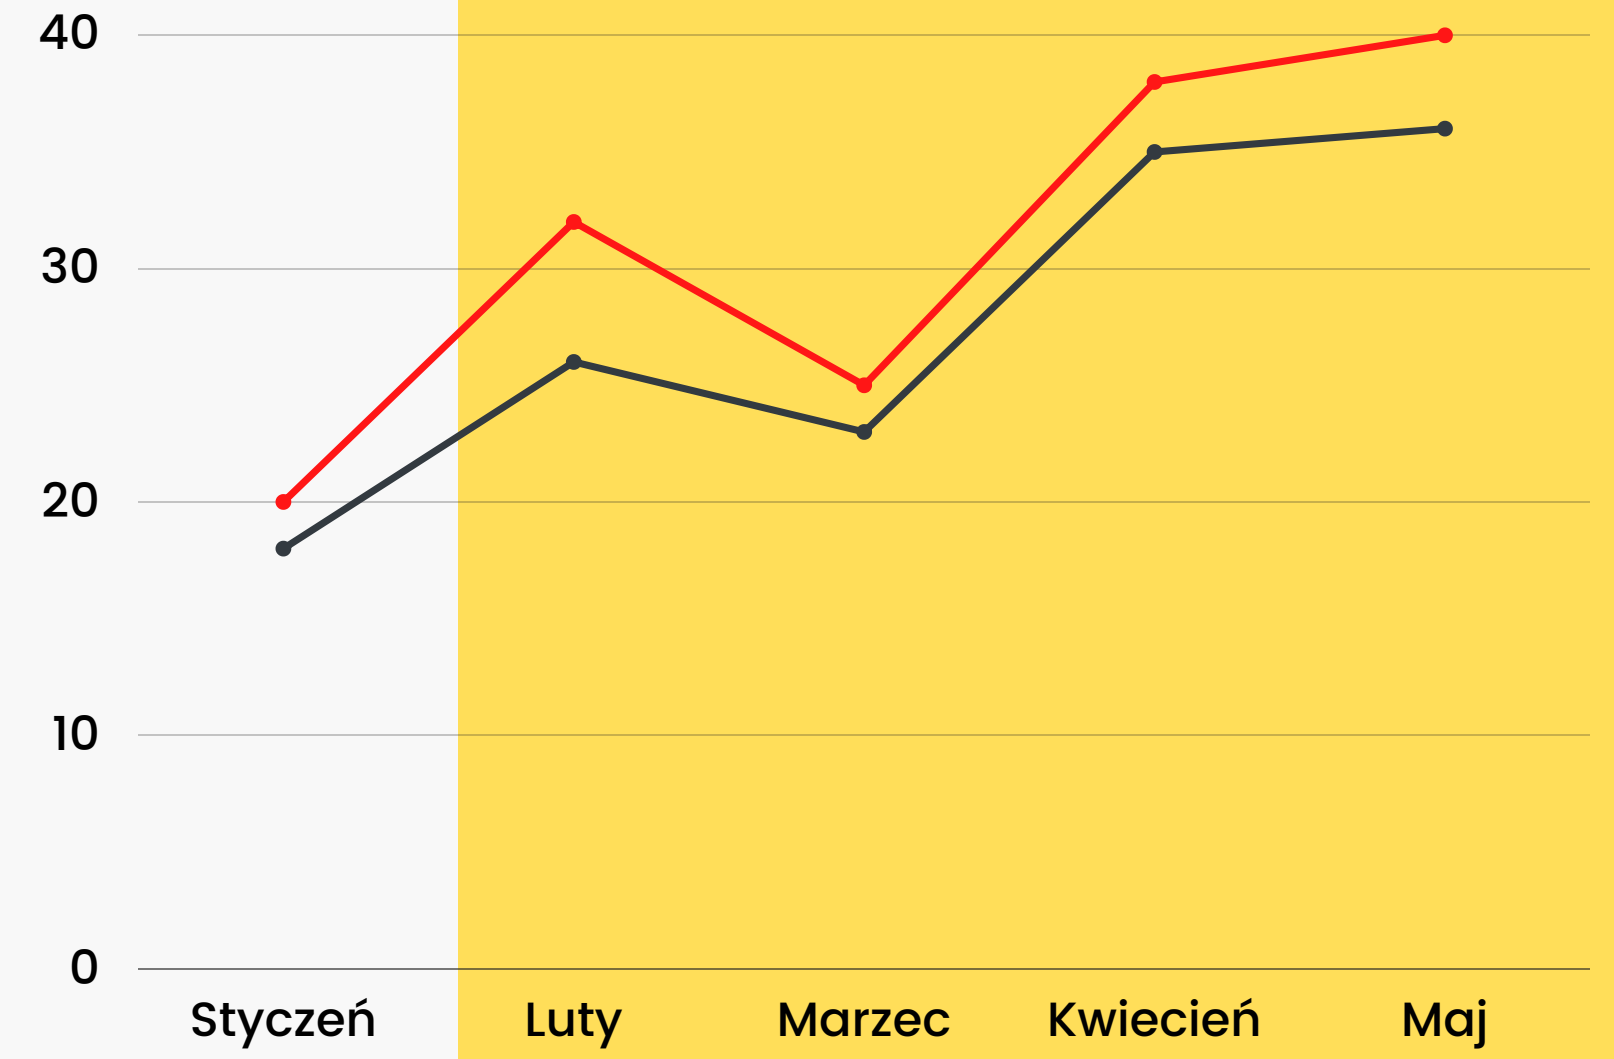

The King of Investment program is based on the principle of arbitrage, i.e. purchases between stock exchanges. The profit is realized as a surplus of purchase-sale transactions. The following prices of company X's stocks are examples of differences in their value on five different exchanges:

Tokyo Stock Exchange - \$6550.00

New York Stock Exchange - \$6280.07

For example, a transfer from the New York stock exchange to Tokyo generates a profit of **\$269.93 in the customer profile!** Our program makes these transfers several times without delays, thanks to a predefined calibration and price differences between stock exchanges.

Return on the investment

1,7% - 6%

**average monthly
return on the investment**

Security

The program stores the client's investment capital on stock exchanges in dollars, so that the value of the capital does not decrease due to stock price fluctuations.

Your whole investment is insured in 100% from the risk of funds loss.

Earn without unnecessary risk

If at any given time the price difference between the stock exchanges is too low to generate the minimum profit determined by the algorithm in the program, it will not transfer the dollar on the stock exchange.

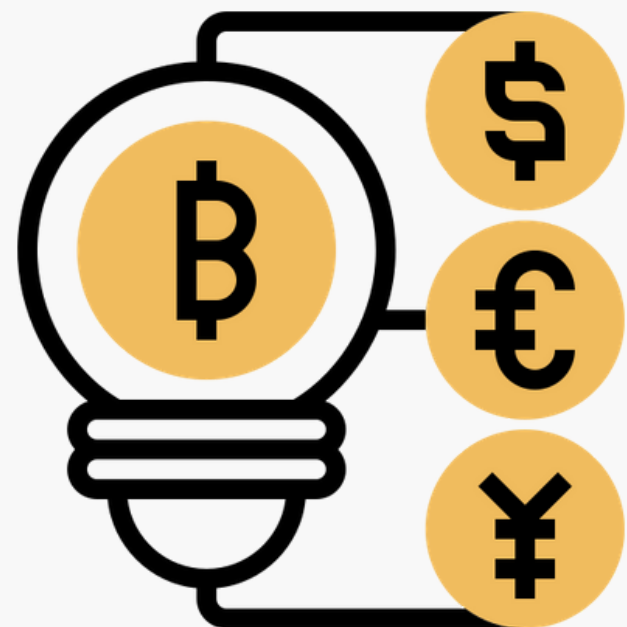

Flexibility

The customer has the option to withdraw his or her profits from the investment at any time (a month after setting up the customer profile).

The profit can be paid out in any currency. The payment of the profits is subject to taxation in accordance with the law and is treated as residual income.

/06

Invest capital in traditional markets

With the King of Investment program, you can achieve a 6% monthly return on your investments thanks to traditional currency investments.

Our program works just like Forex's automated database. We are constantly analyzing the rates of many fiat currencies (such as the American Dollar, Euro, Yen, British Pound and others) as well as currency pairs. When a difference arises in two markets, the currency or currency pair is bought or sold.

/07

Arbitrage System

The arbitrage system has been used in financial markets for many years. Our program has a broader work spectrum and not only analyzes fiat currencies, but also currency pairs and data collected from multiple exchanges at the same time.

A secure return on a traditional market is created when price differences on stock exchanges are disclosed. Check out our offer and gain 6% per month with our currency market analysis tool.

Thank You!
